SUMMARY

Frontend & Full-Stack Developer with 3 months of internship experience at Arnima engineering production web applications. Proficient in React 19, Vite, JavaScript (ES6+), TypeScript, Tailwind CSS, Python, Flask, Node.js, and modern RESTful API architecture. Proven track record of architecting high-performance glassmorphic UI sandboxes, full-stack enterprise suites, and placing in national hackathons (Rank #11 at HH Goa, National Finalist at AI Impact Buildathon). Passionate about responsive UI design, sub-millisecond state reactivity, frontend security best practices, and working knowledge of UX design and Product Management.

EXPERIENCE

Frontend Developer Intern — Arnima Nov 2025 – Jan 2026 (3 Months)

Core Product: ImImmediate • **Stack:** React, JavaScript (ES6+), RESTful APIs, Component Architecture, Web Security

- Refactored the entire frontend codebase of core product ImImmediate, migrating legacy structures into modular, reusable React components and significantly reducing bundle load times.
 - Collaborated with senior software engineers to architect, integrate, and test RESTful APIs, handling asynchronous state hydration, network fallbacks, and seamless data synchronization.
 - Engineered responsive, accessible UI components with pixel-perfect design fidelity, delivering sub-100ms interaction feedback across mobile and desktop viewports.
 - Brainstormed and implemented comprehensive frontend security measures, including client-side input validation, secure token handling, route authorization guards, and protection against XSS and CSRF.
-

PROJECTS

[Prism Playground](#) – Interactive Glass Workspace for React Components • [GitHub](#)

React 19, Vite, Tailwind CSS, SVG Shaders, Babel Standalone, Vitest, Playwright, Vercel

- Engineered an interactive component workbench and prototyping sandbox enabling developers to design, stress-test, and benchmark financial UI widgets in real-time with sub-millisecond reactivity.
- Built physical glass refraction optics using Snell's law SVG displacement maps and damped spring physics outside React's render loop, achieving 60 FPS motion without triggering cascading tree re-renders.
- Architected an origin-isolated iframe sandbox omitting allow-same-origin to safely execute untrusted JSX code, accompanied by zero-backend snapshot sharing serialized through URL hash fragments.
- Implemented React Profiler and Core Web Vitals telemetry (CLS, LCP, FID) to measure commit durations and click-to-paint latency, recording A/B baselines to catch performance regressions.

[Butterlane](#) – Artisanal Bakery Operations & Point-of-Sale (POS) Platform • [GitHub](#)

React 19, Vite, Python 3.13, Flask 3.0, PostgreSQL (Aiven Cloud), SQLAlchemy, JWT, Vercel

- Architected an end-to-end bakery ERP and POS platform managing cake orders across a live kitchen fulfillment state machine (Draft → Confirmed → In Progress → Completed).
 - Developed point-of-sale checkout with dynamic discount calculation, print receipts (@media print), and transactional safety enforcing Idempotency-Key headers against double-charges.
 - Engineered an immutable inventory ledger with PostgreSQL row-level locking for order reservations, automated ingredient deductions, and auditable restock logs.
 - Implemented enterprise authentication with rotated HTTP-only refresh cookies (SameSite=Lax, Secure), bcrypt password hashing, and role-based access control (Admin vs. Store Owner).
-

HONORS & AWARDS

Rank #11 (Top 11 of 10,000+ National Registrations) — [HackerHouse Goa Hackathon 2026](#)

- Secured National Rank #11 out of 10,000+ registered developers nationwide, pitching and delivering a high-performance full-stack web application under an intensive 36-hour sprint.

National Finalist, Top 20 of 40,000 Participants — HCL GUVI AI Impact Buildathon Feb 2026

- Selected in the Top 20 finalists across 40,000+ builders nationwide for engineering an end-to-end classification system with 94%+ accuracy and high-performance frontend interfaces.

Top 10 Finalist (300+ Teams) — IndiaNext Hackathon 2026, K.E.S. Shroff College, Mumbai Mar 2026

- Developed SafeWaves, an intelligent web threat inspection engine with real-time telemetry streaming and heuristic inspection interface, placing in the top 10% of competing teams.

EDUCATION

Indian Institute of Technology (IIT) Madras — Bachelor of Science (BS), Data Science and Applications 2023 – 2027

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Software Engineering, Web Development, Object-Oriented Programming, Statistics.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3, SQL, Java

Frontend: React 19, Vite, Tailwind CSS, Next.js, Redux, Zustand, Component Libraries, Responsive Design, Web Vitals, SVG/Canvas

Backend & DB: Node.js, Express.js, Flask, FastAPI, RESTful APIs, WebSocket (Socket.io), PostgreSQL (Aiven), MongoDB, SQLite, Redis

DevOps & Tools: Docker, Git, GitHub, Vercel, Postman, Linux/Unix, CI/CD, Agile, Web Security (OWASP, XSS, CSRF, JWT Auth), UX Design, Product Management
